

Explanations:

- 1) Every employee has a unique ID
 - 2) The registration_number of each car is already unique, thus we can use it for the PK
 - 3) A car must have at least one seat, otherwise we cannot even drive it, that is why the black losangle was used.
 - 4) Date entity to log and check availability of reservations
- A car can have 1..* reservation/expiration dates.

Questions:

How to implement "if conditions" and throw error to use if necessary ? (Because of the reservation date)

*(reservation expiration date - reservation date) =<7
